

## A powerful suite of safety management tools on a SaaS platform.

EHS managers are now empowered with new levels of insight and control.

**Some firms are** still using clipboards and spreadsheets for safety inspections.

**Others have** made the move to basic entry-level safety software.

**Safety Indicators** helps them both rise from the *data complexity trap* to the leading edge of enlightened EHS management.

**Explore the** intuitive interface, with its surprising range of functions and options.

**Open the** mobile app for completing inspections and other work in the field.

**Check out** our purpose-built Modules that intelligently collaborate to lessen your workload.

Target: 54

# Get on board now for the inevitable future of digital safety management.

**HIGH-LEVEL ANALYTICS FOR REDUCING FUTURE RISK**

- Identify incident trends** and recurring safety performance issues at a glance.
- Focus your analysis on** company safety, not just on inspections.
- Turn lagging indicators** into leading indicators to help prevent injuries.
- View intuitive data** charts and summaries to gain insights and set priorities.

**AUTOMATED FUNCTIONS FOR STREAMLINED OPERATIONS**

- All data from the field is** immediately uploaded and compiled for easy access.
- Safety Managers designate** who will receive which reports and alerts.
- Each stakeholder's dashboard** is configurable to show just the data they need.
- You can set performance targets**, and know when they're not met – and why.
- System protocols ensure accountability**, and track issues so they aren't neglected.
- Use one integrated system** for multiple worksites, departments and projects.
- Easily handle compliance** and other unique reporting requirements.

## More useful and configurable safety features than any other EHS software.

ONLY PAY FOR  
THE MODULES  
YOU NEED

---

### **Audits/Inspections**

Create custom forms, then capture inspection results on the mobile app.

### **Observations**

Use employees as an extra set of eyes to report emerging safety concerns.

### **Corrective Actions**

Assign remediation tasks, and receive alerts if they're not quickly completed.

### **Incidents**

Manage injuries, property damage and other incidents from beginning to end.

### **Training Tracking**

Automatically assign each employee's training courses and monitor compliance.

### **Documents Archive**

Save Safety Data Sheets and other safety docs for easy access and distribution.

### **Equipment Inspections**

Use your phone to scan QR codes to bring up inspection areas and history.
