

SAFETY INDICATORS

0222-1

A powerful suite of safety management tools on a SaaS platform.

EHS managers are now empowered with new levels of insight and control.

Some operations are still using clipboards and spreadsheets for safety inspections.

Others have made the move to basic entry-level safety software.

Safety Indicators helps them both rise from the *data complexity trap* to the leading edge of enlightened EHS management.

Explore the intuitive interface, with its surprising range of functions and options.

Open the mobile app for completing inspections and other work in the field.

And check out the purpose-built Modules that work together to make *your* work easier.

Target: 54

Get on board now for the inevitable future of safety management.

HIGH-LEVEL ANALYTICS FOR REDUCING FUTURE RISK

- Identify incident trends** and recurring safety performance issues at a glance
- Focus your analysis on** company safety, not on just the inspections themselves
- Turn lagging indicators** into leading indicators to help prevent future injuries
- View color-coded data** charts and summaries to gain insights and set priorities

AUTOMATED FUNCTIONS FOR STREAMLINED OPERATIONS

- All data from the field is** immediately uploaded and compiled for easy access
- Safety Managers designate** who will receive which reports and alerts
- Each stakeholder's dashboard** is configurable to show just the data they need
- You can set performance targets**, and know when they're not met – and why
- System protocols ensure accountability**, and track issues so they aren't neglected
- Use one integrated system** for multiple worksites, departments and projects
- Easily handle OSHA** and other unique reporting requirements

More useful and configurable safety features than any other EHS software.

ONLY PAY FOR
THE MODULES
YOU NEED

Audits/Inspections Module

Create custom forms, then capture inspection results on the mobile app

Observations Module

Use employees as an extra set of eyes to report emerging safety concerns

Corrective Actions Module

Assign remediation tasks, and receive alerts if they're not quickly completed

Incidents Module

Manage injuries, property damage and other incidents from beginning to end

Training Tracking Module

Automatically assign each employee's training courses and monitor compliance

Documents Archive Module

Save Safety Data Sheets and other safety docs for easy access and distribution

Equipment Inspections Module

Use your phone to scan QR codes to bring up inspection areas and history

GET EXPERT
